

Things you'll need

- Paper funnel
- Adhesive glue
- Toothpick or similar device to control the distribution of adhesive glue
- A clean area to work on

*****Please read the full list of instructions prior to starting at step one. The glue will take a full 24 hours to cure.*****

Filling memorial jewelry with a threaded bale or screw

1.

Find out how your pendant opens. Some may have a bale that screws off from the top, while others may have a small screw in the back or on the bottom of the jewelry.

2.

Unscrew the bale or screw. Remove and screw the piece together several times. This will give you a feel for how it works and also gives you a chance to make sure there aren't any problems mating the two pieces together.

3.

Remove the bale or screw and using the funnel, put a small pinch of cremains inside the pendant. Do not fill it to the top.

4.

Take the toothpick and run the tip around the threads on the inside of the pendant to clear away any cremains that may be trapped inside the threads.

Filling Memorial Jewelry (Continued)

5.

Place the screw all the way in the pendant with no glue applied yet. Make sure the threads are matching up well. Do not force the bale or screw closed. If the screw doesn't go in all the way, the piece may be overfilled.

6.

Cut a small opening at the top of the tube of glue. Squeeze some glue out on to a piece of paper or cardboard (enough to create a small puddle that you can dip the toothpick in to).

7.

Unscrew the bale or screw part way, and using the toothpick, apply enough glue to generously coat the exposed threads of the bale or screw (if you get any glue on the jewelry you will be able to wipe it away after you've tightened down the bale or screw).

8.

Incorrect: Bale eyelet is facing forward.

Correct: Bale eyelet is facing sideways.

Gently tighten the bale or screw. There will be excess glue that is pushed out. Wipe the excess away with a disposable cloth or paper towel. **Note: If your pendant has a bale, be sure the eyelet is not facing forward or at an angle. This will cause your pendant to hang incorrectly. The eyelet opening should always go sideways.**

9.

The glue will take a full 24 hours to seal properly. You **MUST** allow time for the glue to dry completely. **Do not wear the jewelry while the glue is drying.** Place your pendant on a cloth or paper towel and allow it to dry for a full 24 hours. Check the pendant after it has sat for a few hours and wipe away any glue that has seeped out while it has been drying.

ADHESIVE WARNING: Eye irritant. Can irritate sensitive skin. Wash after contact. Contains methacrylic ester. **Keep away from children.**

1. Cutting the funnel

Cut along the dotted line. Fold the circle so the edges overlap.

2. Taping and trimming the funnel

Tape or glue the funnel. Use your jewelry to gauge the size of the hole needed in the funnel. Cut the bottom of the funnel off to create the desired hole size. Start small, you can always make it larger.
